Exchanges

NASDAQ Stockholm, NASDAQ Helsinki, NASDAQ Copenhagen, NASDAQ Iceland and Oslo Børs.

1 Introduction

1.1 Introduction

Nasdaq, Inc. and its affiliates (collectively “NASDAQ”) and Oslo Børs are the creators of the stock indexes¹ (hereinafter referred to as the “Index Owners” and the “Indexes”) and have granted NASDAQ Stockholm AB (“NASDAQ Stockholm” or the “Exchange”) and the co-operating exchanges the right to use the Indexes in connection with trading in and clearing of contracts related to the Indexes in accordance with these rules and regulations. NASDAQ is the index calculator.

1.2 The Index Family

The index family can basically be divided into two groups.

The objective of the indexes in the first group is to represent the overall state and changes in the level of the economy. The first group includes the VINX All-Share- and the Sector Indexes. The focal point of the first group is to mimic the population of shares representing the index, without complying with liquidity and stability requirements. Since there is no filtering for liquidity the indexes themselves may not be easy to replicate in a portfolio or benchmark against and the pricing of the shares, and hence the index level, may lag due to infrequent trading in the underlying shares.

The second group is focused on investability and periodic stability in the Index Shares, while still reflecting the population of shares from where the index was constructed. The objective of the benchmark index is to reduce administrative routines and costs due to continuous review of the portfolio and secure tradability of the Index Shares in order for the index to function as an investible benchmark for the investment community. In the second group we find the VINX Benchmark-, Small Cap- and Tradable Indexes.

1.3 NASDAQ and Oslo Børs and the Index Committee

NASDAQ and Oslo Børs are the sole and exclusive owners of all rights, titles and interest of the indexes². Any products based on the indexes require permission by the relevant party.

The Index Calculator carries out the periodically and daily maintenance of the indexes, such as calculating and distributing the index levels and calculation parameters, in accordance with these rules.

The Index Owners have set up the NASDAQ and Oslo Børs Index Committee with quarterly meetings. The role of the NASDAQ and Oslo Børs Index Committee is to determine and review these rules and to consider and agree on additions and deletions in accordance with these rules, especially for the semi-annual review of the Benchmark Index.

¹ See Appendix B for list of relevant indexes.

² The use of the indexes is the sole responsibility of the user. NASDAQ and Oslo Børs shall not be liable for any loss or damage whatsoever or howsoever caused or arising in connection with the use of the Indexes.

1.4 Index Currency

An index that consists of securities quoted in different currencies as well as the underlying prices of the securities, are converted into the index currency.

Foreign exchange rate is the WM Company, Closing Spot Rate at 16:00:00 UK time in the calculation of the End Of Day (“EOD”) Index Value³.

SIX Financial Information Intraday Spot Rate is applied to the real time Index calculation during the trading day.

The main index currency is EUR but the multi-currency indexes are also calculated in the following currencies; DKK, NOK, ISK and SEK.

Oslo Børs calculates the exchange rate fixing, by applying the following algorithm on real-time spot rate quotes from the Thomson Reuters:

Thomson Reuters filters the market maker quotations according to the following criteria:

- (i) Market Maker Population: Selection of valid quotation sources;
- (ii) Tolerance-Check: Controls the maximum movement of the mid-price from a moving average based on the last three quotations; and
- (iii) Spread-Check: Controls the spread of the quotation to ensure reasonable spreads.

Three steps procedure to calculate the exchange rate fixing based on valid market maker quotations

- (i) Mid-prices: Calculate the mid-price, i.e. average of bid-ask, for all valid market maker quotes, restricted to maximum one quotation per market maker;
- (ii) Median of the mid-prices: Calculate the median of the mid-prices; and
- (iii) Rounding: The median of the mid-prices is rounded to five (5) decimal places.

If no foreign exchange rate fixing is available arising from technical failure or other causes not controlled by the Exchanges, the Exchanges may use other sources to calculate a new foreign exchange rate fixing. If the Exchanges consider the foreign exchange rate fixing not representative, the Exchanges may calculate a new foreign exchange rate fixing potentially using other sources.

2 Sector Classification

2.1 NASDAQ and FTSE Group (FTSE)

NASDAQ has entered into a licence agreement with FTSE with respect to classification of shares listed on NASDAQ under the Industry Classification Benchmark (ICB)⁴.

³ The WM/Reuters Spot Rates provided by The World Markets Company plc (“WM”) in conjunction with Reuters. WM shall not be liable for any errors in or delays in providing or making available the data contained within this service or for any actions taken in reliance on the same, except to the extent that the same is directly caused by its or its employees’ negligence

⁴ The Industry Classification Benchmark (“ICB”) is a product of FTSE International Limited and has been licensed for use. “FTSE®” is a trade mark of London Stock Exchange and is used by FTSE under license. FTSE and their licensors and affiliates do not accept liability to any person for any loss or damage arising out of any error or omission in the ICB. No use or distribution of ICB may be made without a license from FTSE. For additional information about the Industry Classification Benchmark (ICB) see Appendix A.

NASDAQ has adopted the ICB as the official and primary method for classification of all share classes listed on NASDAQ. The ICB system is comprised of four levels of classification: Industry, Supersector, Sector and Subsector.

THE CLASSIFICATION

ICB is a detailed and comprehensive structure for sector and industry analysis, facilitating the comparison of companies across four levels of classification and national boundaries. The system allocates companies to the Subsector whose definition most closely describes the nature of its business. The nature of a company's business is determined by its source of revenue or where it constitutes the majority of revenue. If a significant change takes place in a company's structure as a result of a corporate event, its industry classification may be reassessed by FTSE. The ICB consists of 10 Industries, 19 Supersectors, 41 Sectors and 114 Subsectors.⁷ The 10 industries of the first level are as follow:

- 0001 Oil & Gas
- 1000 Basic Materials
- 2000 Industrials
- 3000 Consumer Goods
- 4000 Health Care
- 5000 Consumer Services
- 6000 Telecommunications
- 7000 Utilities
- 8000 Financials
- 9000 Technology

The key features of the ICB are⁵:

- + Reliable: Delivered on a timely basis to ensure that new and changing securities are represented.
- + Comprehensive: Comprehensive universe of stocks covering virtually any security an investment professional will encounter.
- + Accurate:
 1. Single classification system with high sector correlation
 2. Continuously monitored by a professional research team
 3. Governed by an independent committee

Note: Companies that are classified as Sector 8980 Equity Investment Instruments or Sector 8990 Non equity Investment Instruments are not ineligible for index population.

COMPANY CLASSIFICATION GUIDELINES

See the ICB rules for more information about the guidelines⁶.

⁵ 'ICB Database', *Industry Classification Benchmark (ICB)*, <http://www.icbenchmark.com>

⁶ "ICB Database", *Industry Classification Benchmark (ICB)*, <http://www.icbenchmark.com>

3 Index Construction and Maintenance

3.1 Index Share Eligibility

In principle, all shares listed on NASDAQ Nordic Exchanges and Oslo Børs are eligible for inclusion in the VINX Index family (together named “shares”). However, certain criteria such as liquidity may make a share ineligible for index purposes.

- + Companies where 90 % or more of the outstanding shares are controlled by a single shareholder will be deemed ineligible;
- + The Index Calculator defines the number of shares in the index by the domicile. Oslo Børs distinguishes between primary or secondary listing. A company whose shares have a secondary listing on the Exchange or a foreign domicile is also eligible for index inclusion. For secondary listings and foreign domicile, only the part of the outstanding shares which is registered in NASDAQ or Oslo Børs CSDs (VPS, VPC, VP and APK) is eligible for inclusion.
- + For the VINX Index Shares with multiple listings in the Nordic countries and primary listing or national domicile in one of the countries can only be included once in index. The country with the highest orderbook turnover captures the total market capitalization in the index. A revision will be conducted every 6 month to determine which orderbook that will apply.
- + If a company has listed multiple share classes, each of which is priced and traded separately, all share classes are eligible for inclusion and are treated as separate shares. Interim shares are also treated as separate instruments from the company’s existing share class.
- + For the VINX Small Cap Index, if a company has listed multiple share classes, only the share type with highest turnover is represented in the index. The market capitalization is calculated on a company level, by multiplying total number of ordinary shares with the last price paid for the share type with highest turnover.
- + Security types not included are closed-end funds, exchange traded funds, mutual funds, unit-investment trusts, convertible debentures, preferred stocks, rights, warrants, and other derivative securities.
- + For VINX Indexes, securities classified as ‘8985 Equity Investment Instruments’ or ‘8995 Non-equity Investment Instruments’ according to FTSE ICB are not considered eligible for index inclusion.

3.2 VINX All-Share and Sector Indexes

3.2.1 General

The All-Share and Sector Indexes are by construction not intended to be investible indexes. The maintenance of the Index Shares is carried out on a daily basis to reflect the continuous changes in outstanding shares and listed companies. New listings shall be included on the second day of listing providing that the company has been assigned the ICB classification.

3.2.2 All-Share Index

The VINX All-Share Index consists of all shares listed on NASDAQ Nordic Exchanges and Oslo Børs.

3.2.3 Sector Indexes

A sector index is active when it includes one or more eligible shares. A sector without an Index Share is closed until one or more shares are eligible for index inclusion. When resuming a sector index, an index base value and base date are both reset in the index.

The VINX Sector Indexes are calculated on Industry and Supersector level (ICB level 1 and 2).

3.3 VINX Benchmark Index

3.3.1 Periodic review of the VINX Benchmark index

The VINX Benchmark Index is constructed to represent all shares listed in the Nordic region. In order to fulfil conditions set forth in the object of the index, Benchmark Index is reviewed semi-annually by the Index Calculator who applies the four criteria in sections 3.3.2-3.3.4 below. In the period between reviews the number of shares for each Index Share applied in the index calculation is fixed with the exception of adjustments for corporate actions with priority for existing shareholders. The Index Calculator will provide both an uncapped and a capped version of the VINX Benchmark Index, and the market capitalization limit is described in section 3.3.4 below.

The review is conducted on the basis of figures as of after closing on the last trading day of October and April. Implementation of the reviewed index will take effect from first trading day of December and June, respectively. Rebalancing will be undertaken using closing prices the day prior to implementation.

3.3.2 Liquidity and industry target criteria

The following five-step process is applied selecting the shares in the index:

- (i) To avoid seasonal fluctuations all eligible shares listed on the relevant Exchanges are sorted according to the previous 12 months official turnover;
- (ii) Shares with lowest turnover according to (i) corresponding to 30% in number are deemed ineligible;
- (iii) Shares with highest turnover according to (i) corresponding to 10% but minimum 25 shares are tagged qualified;
- (iv) All shares according to (i) are sorted according to Supersectors (ICB level 2). Within each Supersector, shares are sorted according to the free float-adjusted market capitalization; and
- (v) Within each Supersector, shares are elected according to ordering in (iv), highest free float-adjusted market capitalization first, until at least 85% of the Supersector's free float-adjusted market capitalization is reached. If needed additional shares with highest turnover according to (iii) are added. The shares with lowest turnover according to (ii) are removed after the selection is made and will not be replaced by other eligible shares. The target of at least 85% of each Supersector's free float-adjusted market capitalization may not be reached since some shares according to (ii) are removed.

If a significant portion of the trading volume of a share which qualifies as an Index Share is attributable to a few transactions or to transactions within a limited time period so that the registered volume is considered not to be representative, the Index Calculator may decide that the share is ineligible.

If a company gains control of 90 % of the outstanding shares in another company, according to section 5.8 below, in the period between October 31 / April 30 and time for publishing the preliminary composition, the acquired company will not be included in the selection process. During a merger or take-over when the outcome is uncertain the Exchanges reserve the right to publish more than one preliminary composition.

If a company changes from secondary to primary listing or changes domicile, the company will inherit historical turnover figures.

3.3.3 Free float

Free float is an important issue when constructing an investible index. The objective of free float criteria is to improve an index's overall investability.

Free float is the proportion of the total amount of share capital available to ordinary investors compared to the total number of listed shares of a company. The balance of a company's share capital will be in the form of strategic holdings, effectively excluded from normal trading.

Free float will utilize the following formula:

Free float = Total Shares Outstanding (TSO) – holders of $\geq 5\%$ of the TSO excluding Hedge Funds

The Free Float Factor will be rounded to the closest 1%. For example, 56.2% will be rounded to 56% and 56.5% will be 57%.

A low free float will not exclude a company from an index but will restrict the percentage portion of the outstanding shares, which is included in the Benchmark Index calculation.

Changes in free float are only made effective in connection with the semi-annual review unless the index's ability to mimic the total market is seriously deteriorated or the free float has changed considerably as a result of a takeover according to section 5.8 below prior to the semi-annual review date.

3.3.4 Market capitalization limit (Capping)

NASDAQ will provide uncapped and capped versions of the VINX Benchmark Index.

If one or few Index Shares dominates the index due to a large weight in the index, two problems arise. The Index Share or its industry may be overrepresented in the index and skew the index performance compared to the investment universe of all shares listed on NASDAQ Nordic Exchanges and Oslo Børs. The index is no longer investible for a majority of the users who benchmark against the index due to possible investment restrictions.

Consequently, to comply with demands of an investible index, the capped version of the selected indexes is constructed in a manner that complies with the investment restrictions implied by legislation regulating investments in mutual funds.

The following index weight restrictions must be met to comply with the legislation regulating investments in mutual funds:

- + The market value of Index Shares issued by the same body may not exceed 10 % of the index total market value; and
- + The market value of Index Shares issued by the same body exceeding 5 % index weight must not combined exceed 40 % of the index' total market value.

The procedure maintaining these restrictions is applied subsequently to application of criteria, section 3.3.2 above.

The Index Calculator is maintaining the weighting restrictions by using a quarterly and daily procedure. The weighting restrictions will be imposed by adjusting the number of shares of the Index Shares $q_{i,t}$. Quarterly capping is applied on the first trading day in March, June, September and December respectively.

Quarterly adjustment:

Selection of Index Shares to the 40 % group on **quarterly** basis:

Index Shares are ranked by their company market value. Index Shares issued by the same body exceeding the 9 % limit will be capped at 9 %. Index Shares are separated into two groups. The first group is filled with shares issued by the same body weighting between 4.5 and 9 % until the total weight has reached the maximum of 36 %.

The initial capping limit for the second group will be 4.5 %. This means that limits are used initially for all Index Shares when the weights are set on quarterly basis. The limits imposed by legislative authorities (5, 10 and 40 %) will in the daily capping process be used as threshold values for the capped companies.

The process of the quarterly division of groups will be applied intra **quarterly** in the event of a Fast Entry.

Daily adjustment:

As needed, rebalancing is done at the close of each day. Index Shares issued by the same body exceeding the 10 % limit will be capped at 9 %. Index Shares issued by the same body initially capped at 4.5 and 9 % will be allowed to float freely up to 10 %. If the total weight of the Index Shares issued by the same body above 5 % exceeds 40 %, Index Shares issued by the same body above 5 % with the smallest weight are capped to 4.5 %. Using a stepwise approach Index Shares are reduced in weight until all weight restrictions are satisfied. This procedure is applied once a day, and as a consequence, the weight of the Index Shares may exceed the 40 and 10 % limits during the day.

3.4 Tradable Index (VINX30)

3.4.1 General

The VINX 30 index is constructed for derivatives trading. The index is aimed to be composed of Index Shares with high liquidity that reflects the Nordic investment universe and function as a

desired investment tool for all types of investors in the marketplace. The underlying shares in the index are highly liquid with preferably good lending possibilities.

3.4.2 Periodic review of the index

The index consists of 30 shares and the index portfolio is reviewed semi-annually. The review is conducted immediately after the December and June expiration, normally on the third Friday in December and third Friday in June. The review is conducted in Euro.

3.4.3 Selection criteria, first time selection

The following method is used in the selection of shares in the index:

- (i) All shares are ranked according to free float adjusted market capitalization;
- (ii) All shares are ranked according to six months official turnover⁷ in Euro⁸; and
- (iii) The 30 largest shares according to free float adjusted market capitalization are first included. If all of the 30 selected shares are among the top 35 most liquid shares they are all selected as Index Shares. If one or more shares are not among the top 35 liquid companies, the shares will be replaced by the instrument that is closest to qualify.

3.4.4 Selection criteria, continuously selection

To keep the population stable, the following rules are applied in the continuously semi-annually selection of shares in the index:

- (i) All shares are ranked according to free float adjusted market capitalization in Euro;
- (ii) All shares are ranked according to six months official turnover in Euro;
- (iii) Shares from the current selection qualify first;
- (iv) Shares among the top 25 in the market capitalization and liquidity ranking will automatically qualify as Index Shares. If top 25 shares are not among the previous index portfolio, shares with ranking lower than 35 in one criterion and the lowest market capitalization will then be removed. If no such shares exist in the current selection, the share with the lowest market capitalization is excluded; and
- (v) Shares in the current index portfolio with ranking lower than 35 in (i) or (ii) will be replaced by shares with the highest market capitalization and liquidity equal to or better than 35 if such share exists.

3.5 VINX Small Cap Index

3.5.1 General

The VINX Small Cap Index shall be an investible index representing the bottom 20% of the shares in regards to market capitalization listed on NASDAQ Nordic Exchanges and Oslo Børs. In the period between reviews the number of shares for each Index Share applied in the index calculation is fixed with the exception of adjustments for corporate actions with priority for existing shareholders.

⁷ Trades that update volume weighted average prices are used in the turnover ranking of shares. If a company has more than 3 months listing history, the turnover figures are semi-annualised as proxy for six months turnover.

⁸ The official turnover in Euro is calculated by using the closing currency rate at the end of the period.

3.5.2 Periodic review of the index

The index portfolio is reviewed semi-annually. The review is conducted on the basis of figures as of after closing on the last trading day of October and April. Implementation of the reviewed index will take effect from first trading day of December and June, respectively. Rebalancing will be undertaken using closing prices the day prior to implementation. The review is conducted in Euro.

3.5.3 Selection criteria, first time selection

The following method is used in the selection of Index Shares to the index portfolio:

- (i) All shares are ranked according to descending market capitalization.
- (ii) All shares are ranked according to twelve months official turnover⁹ in Euro¹⁰.
- (iii) The shares in (i) containing bottom 20% of the cumulative market capitalization are selected as eligible.
- (iv) Shares with lowest turnover according to (ii) corresponding to 30% in number are deemed ineligible
- (v) Shares in (iii), but not in (iv) are selected as Index Shares.

3.5.4 Buffer Rules, continuously selection

To keep the population stable the following buffer rules are applied in the continuously semi-annually selection of shares in the index:

- (vi) Shares in the current selection ranked below the bottom 22.5% in (i) are kept in the index
- (vii) Shares not in the current selection ranked below the bottom 17.5% in (i) will qualify in the index
- (viii) Shares in the current selection with lowest turnover according to (ii) corresponding to 25% in number are deemed ineligible
- (ix) Shares not in the current selection with lowest turnover according to (ii) corresponding to 35% in number are deemed ineligible

If a significant portion of the trading volume of a share which qualifies as an Index Share is attributable to a few transactions or to transactions within a limited time period so that the registered volume is considered not to be representative, NASDAQ may decide that the share is ineligible.

If a company gains control of 90 % of the outstanding shares in another company, according to section 5.8 below, in the period between October 31 / April 30 and time for publishing the preliminary composition, the acquired company will not be included in the selection process. During a merger or take-over when the outcome is uncertain the Index Calculator reserves the right to publish more than one preliminary composition.

If a company changes from secondary to primary listing or changes domicile, the company will inherit historical turnover figures.

⁹ Trades that update volume weighted average prices are used in the turnover ranking of shares. If a company has more than 3 months listing history, the turnover figures are annualised as proxy for 12 months turnover.

¹⁰ The official turnover in Euro is calculated by using the closing currency rate at the end of the period.

4 Index Calculations

4.1 General

The Index Calculator disseminates and calculates Index Values in real-time.

4.2 Formula

4.2.1 Price Return Index Calculation

The Price Return (PR) Index Value reflects changes in market value of Index Shares during the trading day. There are two calculation methods for the PR Index:

- (1) The PR Index that is calculated without regard to ordinary and extraordinary dividends; and
- (2) The PR Index that is calculated without regard to ordinary dividends. The latter PR Index has linkage (same Index Divisor) to a corresponding GTR Index. See Appendix B for the list of calculation methods. The formula is as follows:

$$PR I_t = \frac{PR\ Index\ Market\ Value_t}{PR\ Index\ Divisor_t}$$

$PR I_t$ = Price Return Index Value at time (t)

$$PR\ Index\ Market\ Value_t = \sum_{i=1}^n q_{i,t} * p_{i,t} * r_{i,t}$$

where;

$q_{i,t}$ = Number of shares (i) applied in the Index at time (t)

$p_{i,t}$ = Price in quote currency of a security (i) at time (t)

$r_{i,t}$ = Foreign exchange rate to convert Index Share (i) quote currency into Index currency at time (t)

The Divisor serves the purpose of scaling an Index Market Value to lower order of magnitude, which is recommended for reporting purposes. The Divisor is adjusted to ensure that changes in Index Shares either by corporate actions or index participation occurring outside of trading hours do not affect the value of the Index. A divisor change occurs after the close of Index the Index. The PR Divisor for day (t) is calculated as the ratio of the Start Of Day (SOD) Market Value and the previous day's Index Value as follows:

$$PR\ SOD\ Index\ Divisor_t = \frac{PR\ SOD\ Index\ Market\ Value_t}{PR I_{t-1}}$$

$PR I_{t-1}$ = Price Return Index Value at time (t-1)

$$PR\ Index\ SOD\ Market\ Value_t = \sum_{i=1}^n q_i * p_i * r_{i,t-1}$$

where;

q_i = Number of shares (i) applied in the Index, adjusted to reflect corporate actions if any

p_i = Price in quote currency of a security (i), adjusted to reflect corporate actions if any

$r_{i,t-1}$ = Foreign exchange rate to convert Index Share (i) quote currency into Index currency at time (t-1)

Foreign exchange rate is the previous day's WM Company, Closing Spot Rate at 16:00:00 UK time¹¹ in the calculation of the SOD Index Market Value.

The PR Index that is calculated without regard to ordinary dividends reflects extraordinary dividends. The reinvestment of extraordinary dividend is carried out by adjusting the $p_{i,t-1}$ in the Index with subtraction of extraordinary dividend from its price on the ex-dividend date (t). This adjustment reinvests the dividend in all Index Shares in proportion to their respective weights.

4.2.2 Gross Total Return Index Calculation

The Gross Total Return (GTR) Index Value reflects changes in market value of Index Shares during the trading day. There are two calculation methods for the GTR Index:

(1) The GTR Index with linkage (same Index Divisor) to a corresponding PR Index; and

(2) The GTR Index with no linkage to a corresponding PR Index. See Appendix B for the list of calculation methods. The formula is as follows:

$$GTR\ I_t = GTR\ I_{t-1} * \frac{PR\ I_t + IDP_t}{PR\ I_{t-1}}$$

$GTR\ I_t$ = Gross Total Return Index Value at time (t)

$GTR\ I_{t-1}$ = Gross Total Return Index Value at time (t-1)

$PR\ I_t$ = Price Return Index Value at time (t)

$PR\ I_{t-1}$ = Price Return Index Value at time (t-1)

$$IDP_t\ (\text{Index Dividend Points}) = \frac{\text{Index Dividend Market Value}_t}{\text{Index Divisor}_t}$$

$$\text{Index Dividend Market Value}_t = \sum_{i=1}^n q_{i,t} * d_{i,t} * r_{i,t-1}$$

where;

$q_{i,t}$ = Number of shares (i) applied in the Index at time (t)

$d_{i,t}$ = Ordinary dividend in the index at time (t)

$r_{i,t-1}$ = Foreign exchange rate to convert Index Share (i) quote currency into Index currency at time (t-1)

For the GTR Index with no linkage to a corresponding PR Index, the Divisor is calculated as

¹¹ The WM/ Reuters Spot Rates provided by The World Markets Company plc ("WM") in conjunction with Thomson Reuters. WM shall not be liable for any errors in or delays in providing or making available the data contained within this service or for any actions taken in reliance on the same, except to the extent that the same is directly caused by its or its employees' negligence".

follows:

$$GTR\ SOD\ Index\ Divisor_t = \frac{GTR\ SOD\ Index\ Market\ Value_t}{PR\ I_{t-1}}$$

$$GTR\ SOD\ Index\ Market\ Value_t = \sum_{i=1}^n q_i * p_i * r_{i,t-1}$$

where;

q_i = Number of shares (i) applied in the Index, adjusted to reflect corporate actions if any

p_i = Price in quote currency of a security (i), adjusted to reflect corporate actions if any

$r_{i,t-1}$ = Foreign exchange rate to convert Index Share (i) quote currency into Index currency at time (t-1)

$PR\ I_{t-1}$ is provided in Index File Report Products.

Foreign exchange rate is the previous day's WM Company, Closing Spot Rate at 16:00:00 UK time in the calculation of the SOD Index Market Value.

The GTR Index Value reflects ordinary and extraordinary dividends. The reinvestment of extraordinary dividend is carried out by adjusting the $p_{i,t-1}$ in the Index with subtraction of extraordinary dividend from its price on the ex-dividend date (t). This adjustment reinvests the dividend in all Index Shares in proportion to their respective weights.

4.2.3 Net total return Index Calculation

The Net Total Return (NTR) Index Value reflects ordinary and extraordinary dividends adjusted for withholding tax rates. The formula is as follows:

$$NTR\ I_t = NTR\ I_{t-1} \times \frac{NPR\ I_t + NetIDP_t}{NPR\ I_{t-1}}$$

$NTR\ I_t$ = Net Total Return Index Value at time (t)

$NTR\ I_{t-1}$ = Net Total Return Index Value at time (t-1)

$NPR\ I_t$ = Net Price Return Index Value at time (t)

$NPR\ I_{t-1}$ = Net Price Return Index Value at time (t-1)

$$NPR\ I_t = \frac{NTR\ Index\ Market\ Value_t}{NTR\ Index\ Divisor_t}$$

Net Price Return Index Value is available in index file report products. It is calculated only as the basis for the NTR and the GTR Index with no linkage to a corresponding PR Index.

$$Net\ IDP_t\ (\text{Net Index Dividend Points}) = \frac{Net\ Index\ Dividend\ Market\ Value_t}{NTR\ Index\ Divisor_t}$$

$$NTR\ Index\ Net\ Dividend\ Market\ Value_t = \sum_{i=1}^n q_{i,t} * (d_{i,t} * 1 - w_{i,t}) * r_{i,t-1}$$

where;

$q_{i,t}$ = Number of shares (i) applied in the Index at time (t)

$d_{i,t}$ = Ordinary dividend adjusted for withholding tax rate (WTR) in the Index at time (t)

$r_{i,t-1}$ = Foreign exchange rate to convert Index Share (i) quote currency into Index currency at time (t-1)

$w_{i,t}$ = Withholding tax rate applied for the Index Share at time (t)

The NTR Divisor for day (t) is calculated as the ratio of the SOD Market Value and the previous day's Index Value as follows:

$$NTR\ SOD\ Index\ Divisor_t = \frac{NTR\ SOD\ Index\ Market\ Value_t}{NTR\ I_{t-1}}$$

$NTR\ I_{t-1}$ = Net Total Return Index Value at time (t-1)

$NTR\ SOD\ Index\ Market\ Value_t = \sum_{i=1}^n q_i * p_i * r_{i,t-1}$

where;

q_i = Number of shares (i) applied in the Index, adjusted to reflect corporate actions if any

p_i = Price in quote currency of a security (i), adjusted to reflect corporate actions if any

$r_{i,t-1}$ = Foreign exchange rate to convert Index Share (i) quote currency into Index currency at time (t-1)

Foreign exchange rate is the previous day's WM Company, Closing Spot Rate at 16:00:00 UK time in the calculation of the SOD Index Market Value.

The NTR Index Value reflects ordinary and extraordinary dividends adjusted for withholding tax rates. The reinvestment of extraordinary dividend is carried out by adjusting the $p_{i,t-1}$ in the Index with subtraction of extraordinary dividend less the withheld tax from its price on the ex-dividend date (t). This adjustment reinvests the dividend in all Index Shares in proportion to their respective weights.

4.3 Last Sale Price

The Last Sale Price ("LSP") refers to the closing price reported on each Index Share's Exchange.

If an Index Share does not trade on its Exchange on a given day or the Exchange has not opened for trading, the most recent LSP from the Exchange (adjusted for corporate actions, if any) is used. If an Index Share is halted during the trading day the most recent LSP is used until trading resumes.

4.4 Expiration Index (monthly)

In calculating the expiration index ("VINX30EXP") for a given trading day, VWAP is applied for each Index Share according to section.

In calculating the Volume Weighted Average Price (“VWAP”) for an Index Share, the price shall be calculated by reference to the aggregate trading amount that day on the Exchange, converted, where appropriate, into Euro, divided by the corresponding number of such shares. Conversion from the Index Share's currency into Euro takes place continuously throughout the trading day subject to the currency fix established by the Exchange applicable from time to time.

When calculating the VWAP for Index Shares, only transactions executed in the INET trading system and reported in accordance with NASDAQ Nordic Member Rules using Trade Type “Automatch” and automatically matched trades from Oslo Børs’ trading system between 15.00 and 16.00 (CET) on the Expiration Day shall be included. In case no transactions in the index share have taken place during the reference period, the last price paid prior to the reference period will be used for the purposes of the calculation.

If the Index Calculator is unable to calculate the VWAP for an Index Share on a particular trading day, because no exchange transactions have been carried out for a certain share, its price shall be the VWAP for such share on the last trading day on which it is possible to calculate such VWAP in accordance with this section.

If the Index Calculator considers that the price of one or more Index Shares on a particular trading day has been unduly influenced so that the VINX30EXP Index or VWAP cannot be calculated in a representative way, the Exchange may ignore that day, or one or more exchange transactions carried out during the day, and use the VWAP for Index Shares for a part of the trading day or the most recent prior trading day.

4.5 Number of Shares

4.5.1 VINX All-Share and Industry/Sector Indexes

The number of shares of a company applied in the index, $q_{i,t}$ in the formula in section 4.2 above, is the current outstanding number of shares. If corporate actions cause adjustments to the index, the number of shares is changed to fully reflect the new market capitalization of the company in the index.

In connection with non-cash issues and similar issues makes the adjustment without delay (see section 5 below).

For secondary listings, the number of shares for each share applied in the index calculation is changed by the Index Calculator on the first trading day of each month. The adjustment is based on the number of shares, which is registered in relevant NASDAQ CSDs (VPC, APK and VP) at the time. Oslo Børs changes the number of shares on the third Friday in March, June September and December

4.5.2 VINX Benchmark Index

The number of shares of an Index Share applied in the index, $q_{i,t}$ in the formula in section 4.2 above is a result of the semi-annual review and is fixed in the period between reviews with the exception of adjustments for corporate actions with priority for existing shareholders. The Index Owners will provide both an uncapped and a capped version of the Benchmark Index. The market capitalization limit is described in section 3.3.4 above.

4.5.3 VINX30 Tradable Index

The number of shares of an Index Share applied in the index, $q_{i,t}$ in the formula in section 4.2 above is a result of the semi-annual review and is fixed in the period between reviews with the exception of adjustments for corporate actions with priority for existing shareholders.

4.5.4 VINX Small Cap Index

The number of shares of an Index Share applied in the index, $q_{i,t}$ in the formula in section 4.2 above is a result of the semi-annual review and is fixed in the period between reviews with the exception of adjustments for corporate actions with priority for existing shareholders

4.6 Suspension and Trading Halt

In case of a suspension or trading halt of an Index Share, please refer to the trading rules of the relevant Exchange, NASDAQ Nordic Exchanges or Oslo Børs.

5 Corporate Actions

This section lists the most common corporate actions undertaken by listed companies and describes the appropriate adjustment applied by the Index Calculator to uphold the correct representation of the indexes' performance. Re-balancing will be undertaken using Last Sale Prices the day prior to implementation.

The following corporate actions may lead to an adjustment of the indexes.

- Issues
- Split / Reverse split and change in face value
- Market price issue
- Spin-off and adjustments for issues
- Merger / take-over
- Redemption and cancellation of shares

The adjustments effected after the individual events are described in detail below.

5.1 Discretionary adjustments

The relevant Exchanges decide which adjustment alternative shall be employed. The Index Calculator may in the cases described below make other adjustments than those stated, if warranted by special circumstances. The Index Calculator may also make adjustments to an index in other cases than stated below. Notwithstanding, the index adjustments shall wherever possible be in accordance with the aims set forth in section 4.2 above.

5.2 Daily vs. periodic review of Index Shares

There is a fundamental difference in the treatment of adjusting number of shares in indexes that only review number of shares periodically compared to that of indexes reviewing number of shares on a daily basis.

Indexes reviewing the number of shares on a daily basis include all shares outstanding or thereof implied number of shares in the event of corporate actions.

Indexes reviewing the number of shares periodically, the new number of shares is determined in accordance with the terms of the corporate action.

5.3 Dividends

If a dividend is quoted in a different currency than the Presentation Currency, the dividend amount will be recalculated using the t-1 WM Company Closing Spot Rate (1600 UK), where t-1 is the trading day before the ex-day.

5.2.1 Ordinary dividends and distribution

5.2.1.1 Price Return Index

Adjustment shall not be made for the payment of ordinary dividends. Adjustment shall neither be made for stock dividends, cash distributions or for capital reductions where the whole or part of the distribution replaces an ordinary dividend according to the Index Calculator's opinion.

5.2.1.2 Gross and Net Total Return Index

Adjustment shall be made for the payment of ordinary dividends. Adjustment shall also be made for stock dividends, cash distributions or for capital reductions where the whole or part of the distribution replaces an ordinary dividend according to the Index Calculator's opinion. The net total return indexes are calculated by reinvesting the dividend after deduction of withholding tax.

Ordinary dividend is added to the calculation as Index Dividend Points according to section 4.2.2 and 4.2.3 above respectively

5.2.2 Extraordinary dividends and distributions

5.2.2.1 All index versions (Price, Gross, Net)

Where a company, the shares of which constitute an Index Share, decides upon a distribution which according to the Index Calculator's opinion is additional or non-regular, the Index Calculator shall carry out an adjustment. The price of the Index Share is adjusted for the amount of the extraordinary dividend.

The adjustment is carried out by adjusting the opening price of the Index Share which on the ex-day shall be determined at the most recent transaction price on the preceding trading day, less the value of the dividend that is calculated according to the abovementioned principles. The net total return indexes (NI) are calculated by reinvesting the dividend after deduction of withholding tax.

Ordinary dividend is added to the calculation as Index Dividend Points according to section 4.2.2 and 4.2.3 above respectively

5.2.3 Dividend adjustment of Tradable indexes (VINX30)

Adjustment shall not be made for the payment of ordinary dividends. Adjustment shall neither also not be made for scrip dividends, other cash distributions or for capital reductions where the whole or part of the cash distribution or the amount of the reduction replaces an ordinary dividend.

Where the company, the shares of which constitute an Index Share, decides upon a distribution of cash which is declared by the company to be additional or non-regular the Exchange shall carry out an adjustment. The adjustment is carried out by adjusting the opening exchange value of the Index Share, which on the Ex-Day shall be determined at the most recent transaction price on the preceding Bank Day, less the value of the cash dividend that is calculated according to the abovementioned principles.

$$\tilde{p}_{i,t-1} = p_{i,t-1} - \text{dividend}$$

5.4 New Share Issue with rights for existing shareholders (Rights Issue)

New share issue is an offer by the company to existing shareholders to take part in a new issue of shares. The new shares are offered in proportion to each shareholder's existing holding, generally at a reduced price. The issue of shares at below-market-price results in dilution of the head shares. In a rights issue both the number of shares outstanding and market capitalization of the company increases.

Effective from the ex-day, the number of shares and price of the Index Share are adjusted to reflect its true performance.

In a normal rights issue the free float factor is unaffected. If the rights issue is a repair issue, i.e. a private placement followed by a rights issue to the remaining shareholders, the free float factor may be altered.

It is assumed that the rights issue is fully subscribed. For indexes reviewing number of shares on a daily basis and in the case of rights issue not fully subscribed, the number of shares included in the index will be adjusted to reflect the actual number of shares subscribed. For indexes where the numbers of shares are reviewed periodically and in the case of rights issue not fully subscribed, the number of shares included in the index may be adjusted to reflect the actual number of shares subscribed. If the new shares deviate significantly from the Index Share, the method described in section 5.8.1 below shall be applied.

As legislation in Denmark allows for issues with deviating dividends, the following only applies to issues on NASDAQ Copenhagen. For this type of issues, theoretical prices for the use in the index are calculated for the new temporary security taking into account the actual difference in dividend payments on 'old' and 'new' shares. The calculation is made on the basis of the price for the permanent security (after the issue) after deduction of the dividend difference. Calculations of the theoretical prices are based on the most recent dividend paid.

$$p_{i,\text{new}} = p_{i,\text{old}} - (\text{dividend}_{\text{old}} - \text{dividend}_{\text{new}})$$

Temporary shares with different dividends are included separately in the index calculation because, by definition, the price for the share will differ from the price for the permanent share.

When the temporary share is later merged into the permanent share, an adjustment is made the day after the general meeting, which ensures that the transfer to the permanent share does not affect the index value.

5.4.1 Conditional ex-day

If a share trades exclusive the right to participate in a rights issue prior to the General Meetings approval of the rights issues in question, the Exchanges may exclude the share until such approval is submitted. Each case should be reviewed individually.

5.5 Bonus issue

A bonus issue or stock dividend is an issue of shares free of charge to existing shareholders, the shares being brought into existence by the capitalization of the company's reserves. The new shares are issued in proportion to each shareholder's existing holding. The issue of bonus shares is merely an accounting transaction and results in no flow of capital into or out of the company. The number of shares increases but the market capitalization of the company remains unchanged. If the new shares deviate significantly from the Index Share, the method described in section 5.8.1 below shall be applied.

The Index Calculator will increase the number of shares of the Index Share, by the number of additional shares on the ex-day.

5.5.1 Conditional ex-day

If a share trades exclusive the right to participate in a bonus issue prior to the General Assembly's approval of the bonus issues in question, the Exchanges may exclude the share until such approval is submitted. Each case should be reviewed individually.

5.6 Split / Reverse split and change in face value

A stock split or reverse split is the action of a company in splitting or recouping its shares, reducing or increasing, respectively, par value in proportion and so increases or decreases, respectively, the number of shares. The economic effect of a stock split or reverse stock split is equivalent to bonus issue, as there is no flow of capital into or out of the company. The number of shares increases but the market capitalization of the company remains unchanged. If the new shares deviate significantly from the Index Share, the method described in section 5.8.1 below shall be applied.

A reduction of share capital removes part of the nominal share capital of an Index Share without affecting the market value. If the reduction takes place by maintaining the number of shares but reducing the face value of the shares (change in denomination) the price will not be affected and only the face value will be changed.

The Index Calculator will increase the number of shares of the Index Share, by the number of additional shares, on the day that the Index Share is first available for trading on the Exchange ex rights (ex-day).

5.7 Market price issue

Market price issues where existing shareholders have waived their pre-emptive right to subscribe in the issue are usually offered to the public, directly to a person or an organisation. As the issue is not reserved for present shareholders it is assumed that they are somehow compensated for, if any, dilution. The issue of new shares results in flow of capital into the company, the number of shares increases and the market capitalization of the company changes. Other issues like private placements and employee share issues, assimilation and

division of shares, conversion of convertible debts and exercise of warrants or similar securities are also treated as a market price issue.

Effective on the ex-day, the number of shares of the Index Share is adjusted in indexes that review the number of shares on a daily basis in order to reflect the new market capitalization of the company. For indexes reviewing the number of shares on a periodically basis, new shares from the issue are not included before implementation of the new index composition at the next periodic review. If the new shares deviate significantly from the Index Share, the method described in section 5.8.1 below shall be applied.

As legislation in Denmark allows for issues with deviating dividends the following only applies to issues on the NASDAQ Copenhagen. For this type of issues, theoretical prices for the use in the index are calculated for the new temporary security taking into account the actual difference in dividend payments on 'old' and 'new' shares. The calculation is made on the basis of the price for the permanent share (after the issue) after deduction of the dividend difference. Calculations of the theoretical prices are based on the most recent dividend paid.

Temporary securities with deviating dividends are included separately in the index calculation because, by definition, the price for the security will differ from the price for the permanent share.

When the temporary security is later merged into the permanent share, an adjustment is made the day after the general meeting, which ensures that the transfer to the permanent share does not affect the Index Value.

5.8 Spin-off and adjustments for issues

A spin-off is the action of a parent company distributing out among its shareholders the controlling shares in a subsidiary company or issuing of shares in a new company based on a part of its current business. The spin-off results in outflow of capital in form of capital transfer from the parent company to the new company. In a spin-off the number of shares outstanding remains unchanged. However, the price of the Index Share will be affected.

5.8.1 Basket Method, Valuation Method, Fixed Price Method and Exclusion from the index

When the company, the shares of which constitute an Index Share, carries out any of the following measures and where the shareholders have preferential rights of participation the Basket Method, Valuation Method, Fixed Price Method or Exclusion from the index shall be used:

- (i) issue of convertible bonds (debentures), debenture certificates carrying subscription warrants or similar securities;
- (ii) offer to acquire securities or rights of any type or receive such securities or rights without consideration; and
- (iii) when a new issue is carried out which involves the issue of a new type of share having rights that deviate significantly from the rights carried by the Index Share.

Basket Method

The Basket Method may be used where the securities are considered eligible for index inclusion and registered on, or listed on an exchange or market place approved by the Exchange prior to or on the ex-day. The shares will be included in the index as an extra Index Share on the ex-day

and no adjustment will be made to the price of the distributing share. The start price of the extra Index Share will be set to zero (0). The extra Index Share will be calculated in the Index at LSP and will subsequently be removed from the Index at the end of the ex-day at that day's LSP.

If the securities are to become registered with, or listed on, an exchange or market place approved by the Index Calculator in the near future after the distribution, they will be included as an extra Index Share on the ex-day. The start value of the extra Index Share will be determined by the difference between LSP and the first traded price on the ex-day (t) of the distributing share. That value will then be fixed until the first trading day of the extra Index Share. On its first trading day, the extra Index Share will start at the fixed price determined at (t) and then be included at LSP and be removed from the Index at the end of the day at that day's LSP.

Valuation Method

Where valuation of the right can be effected, the opening exchange Price of the Index Share $P_{i,t-1}$ on the ex-day shall be determined at the LSP less the calculated value of the right. Thereafter the regular index calculation shall take place employing the most recent transaction prices.

The Valuation Method may be used where the rights or when-issued futures are listed on the Exchanges or another exchange or market place approved by the Exchanges. The Exchanges have also the possibility of using an OTC stock price. These prices will only be used if they are representative taking into consideration the volume of trading in the rights or when-issued futures. In such cases the valuation shall be based on the LSP of the rights or the when-issued futures on the day prior to the ex-day.

The calculated value of the right can also be based on the median value of valuations from members of the Exchanges, however, on the condition that the Exchanges, not later than the trading day prior to the ex-day, receive no less than five valuations.

If a satisfactory estimate of the right can be obtained, the Valuation Method shall primarily be used. Secondly the Fixed price method shall be used.

Fixed price method

If no satisfactory estimate of the right has been obtained, effective on the ex-day only, the index is calculated using the LSP from the previous trading day. This price is used in the calculation of the index up to and including that day the first LSP is registered excluding subscription rights (or corresponding rights). The following day, a new base value is calculated on the basis of the previous day's LSP

Exclusion from the index

If no satisfactory estimate of the right has been obtained, effective on the ex-day only, the Index Share is excluded from the index. However, if no price has been obtained on the ex-day, the Index Share will remain excluded from the index until the day after the first price observation. The adjustment results in the excluded Index Share having the same performance as the weighted average performance of the other Index Shares as a proxy for its true performance.

5.9 Merger / take-over

A merger or take-over is to combine the ownership of two companies into a new company or that one company obtains the ownership of the other.

The adjustments below will be effective on the day the acquiring company controls at least 90% of the outstanding shares in the acquired company. The term 'control' is here defined as when either, (a) the acquiring company notifies the Exchanges of their control or receiving accepts of at least 90 %, (b) the transaction is registered in the Exchange's trading system or (c) the shares are registered with the NASDAQ Nordic Exchanges or Oslo Børs CSDs (VPS, VPC, APK and VP).

In indexes reviewing the number of shares on daily basis:

- (i) If the acquiring company and the acquired company are listed on one of the Exchanges, the acquired company is deleted from the index when the company is de-listed from the Exchange or when shares issued to the shareholders in the acquired company is subject for trading in the acquiring company.
- (ii) If the acquiring company is not listed, the acquired company is deleted when 90 % acceptance is reached.

In indexes reviewing the number of shares on periodically basis:

In case such a replacement shall take place, the number of shares to be included in the Benchmark Index Calculation is determined in accordance with the terms of the offer or merger. Any conditions in the offer are not considered if the acquiring company gains control.

- (i) If the acquiring company and the acquired company are Index Shares and the acquisition is settled entirely or partly in eligible shares, the market capitalization of the acquiring company is increased in accordance with the terms of the offer or merger. The acquired company is deleted from the index.
- (ii) If the acquiring company is not an Index Share and the acquisition is settled entirely or partly in eligible shares, a part of the market capitalization of the acquiring company is included in the index in accordance with the terms of the offer or merger. In case the new Index Share is listed on the Exchange before the last listing day for the existing Index Share, the replacement shall take place with effect from the second listing day regarding the new Index Share on the Exchange. In cases where the Index Share is de-listed from the Exchange before the first listing day for the new Index Share, the Index Share shall be deleted effective from the day following the last trading day of the Index Share. The new Index Share shall be included from the second listing day.
- (iii) If the acquiring company is not listed on the Exchanges or otherwise deemed unsuitable for inclusion, the acquired company is deleted from the index without including a new share.
- (iv) If the acquiring company is an Index Share and the acquired company is not, the market capitalization of the acquiring company is not increased until the next semi-annually review.

However, if a breach in the conditions of the offer results in reversing the adjustment, the reversing is treated as spin-off in section 5.7 above.

5.9.1 Take-over: Adjustment of Free Float

For the Benchmark index to maintain its investability after a substantial decrease in the shares available for trading the free float may be adjusted in the following case. When the terms and conditions of the take-over offer, including the minimum control of the acquired company, are

fulfilled the free float can be adjusted. The adjustment will take effect two trading days after the acquiring company has announced the result of the offer. If the acquiring company obtains over 90% control of the acquired company, section 5.8.1 will be applied.

5.10 Redemption and cancellation of shares

In indexes reviewing number of shares periodically the adjustment is only made if the Index Share resolves upon the redemption and cancellation of shares and if the shareholders have preferential rights to participation, the number of shares shall be adjusted normally on the trading day following the day on which the Exchange has received the conclusive announcement. Adjustment shall take place through a reduction in the number of shares included in the Index Share.

If the capital reduction is followed by a distribution of cash and/or rights, the corporate action is treated according to section 5.7 above.

For NASDAQ Copenhagen the reduction is subject to the approval of the Danish Commerce and Companies Agency, which means that it will take effect the day after the day the reduction takes place.

5.11 Fast entry

A new share class listed on the Exchanges is generally not included in the index composition immediately in indexes where the number of shares is reviewed periodically. However if a newly listed share class is considered by the relevant Exchange of NASDAQ Nordic Exchanges or Oslo Børs to result in a serious deterioration in the Benchmark Index' ability to mimic the population of shares representing the market, or if it is significant probability for the company to constitute the Benchmark Index at next rebalancing date, fast entry may be considered. No other shares are excluded resulting from addition of a new share. For the All-Share and Industry/Sector Indexes a new share class is immediately included in the index.

5.12 Fast exit

If an Index Share is delisted from NASDAQ Nordic Exchanges or Oslo Børs, an eligible replacement share is generally not included in the index immediately. This principle of fast exit is used in all indexes. The exclusion of an Index Share will usually be carried out on its last trading day unless the share is deemed unsuitable for index purposes earlier.

Shares will be removed at zero value, if considered to be in liquidation (and therefore of no value), or at the suspension price for all other circumstances. The NASDAQ Nordic Exchanges and Oslo Børs Index Committee will at their next regular meeting consider deleted shares, whose quotations are subsequently restored, for re-inclusion. Any reinclusion will be at the deleted price.

Should a deleted share that has been suspended at a price other than zero (which would normally be the suspension price) be subsequently delisted and deemed to be of zero value, this share will be included for one day's calculation in the index from which it was removed to enable the fall in the share's value to be reflected in the Index Value. In this situation, the stock will be

reincluded at the suspension price, and its price will be zero throughout that day's calculation, including the Last Sale Price.

5.13 Other adjustments

The Index Calculator may, with respect to adjustments, make an adjustment in circumstances other than those specified above or decide to modify a provision regarding adjustment or not to implement an adjustment.

6. General Announcement Policy

NASDAQ announces Index-related information via our premier service Global Index Watch at <http://indexes.nasdaqomx.com>.

Deadlines for announcements:

- + **Rule amendments:** Material changes to the rules are normally announced 3 months before they are put into effect.
- + **Periodic index composition:** A notice is normally announced no less than one (1) week prior to implementation. The Exchange reserve the right to alter the announced composition in case of a merger, take-over or other major events that is expected to deteriorate the index' ability to mimic the population of stocks representing the market.
- + **Daily maintenance:** Adjustments of the "Benchmark index" and "Tradable index" due to corporate actions and dividends are announced as soon as possible after the Exchanges have received all information needed to accomplish the adjustments and no later than the day prior to the event taking effect. Adjustments of other Indexes are announced no later than the day prior to the event taking effect.

In the event that an Index calculation has been corrected historically, an announcement will be provided and clients are asked to update their databases accordingly.

7. General Correction Policy

Generally, the indexes are maintained on an ongoing basis and any corporate actions are handled simultaneously as they occur, given that all necessary information is publically available. However, there may be events where there is not sufficient public information available or that the event is announced post ex-day. In such cases, NASDAQ will decide on a case by case basis whether the event can be implemented in connection to the regularly scheduled index reviews or if a historical correction of the affected indexes is warranted.

Any historical correction to an index is limited to a time frame of six (6) months prior, counting from the date where the correction is being implemented.

8. Discretionary Adjustments

NASDAQ may, due to special circumstances, if deemed essential, apply discretionary adjustments to the index. For such changes to become effective, the prior approval of the Index Ombudsman is required.

9. Alternative information Retrieval

If, in the opinion of the Index Calculator, technical or other reasons, render the automatic transmission of price information or other information regarding an Index Share or currency fix from the NASDAQ Exchanges, or other information system approved by the Index Calculator, either wholly or partially unavailable, or if such price information is unreliable or in any other way fails to reflect the development of market prices in the currency type or Index Shares, the Index Calculator may utilize another source of information and thereby apply other bases for the calculation of the Index than those which otherwise are stated in these rules.

Intellectual property rights

NASDAQ and its affiliates are the sole and exclusive owners of all rights and titles to the Indexes and the trademarks related thereto. For any data used or products based on, or linked to, the Indexes, a license from NASDAQ or its affiliates is required.

This document and its contents may not be reproduced, redistributed, stored in retrieval system, or passed on, directly or indirectly, to any other person or published, or transmitted by any other form or means whether electronic, mechanical, photocopying, recording or otherwise in whole or in part, for any purpose without the prior written consent of NASDAQ or its affiliates.

Disclaimer

The Index Calculator may, from time to time, exercise reasonable discretion as it deems appropriate in order to ensure Index integrity including but not limited to quantitative inclusion criteria. The Index Calculator may also, due to special circumstances, if deemed essential, apply discretionary adjustments to ensure and maintain the high quality of the index construction and calculation. The Index Calculator and its affiliates do not guarantee the accuracy or completeness of any Index or of the data used to calculate the Index or determine the Index components, or the uninterrupted or undelayed calculation or dissemination of any Index. The Index Calculator and its affiliates do not guarantee that any Index accurately reflects past, present, or future market performance.

Limitation of Liability

The Index Calculator and its affiliates assume no liability of any nature (including, but not limited to negligence) for any loss, damages, costs, claims and expenses related to or arising out of the use of the Indexes or any data included therein. The Index Calculator and its affiliates hereby expressly disclaims all warranties, expressed or implied, as to the availability, accuracy, uninterrupted calculation, completeness, merchantability or fitness for a particular purpose with respect to the Indexes or any data included therein. Neither the Index Calculator, its affiliates nor any third party makes any express or implied warranties or representations with respect to the Indexes, the results to be obtained by their use or the value of the Indexes at any given time. Without limiting any of the foregoing, in no event shall the Index Calculator or any of its affiliates have any liability for any direct damages, lost profits or special, incidental, punitive, indirect or consequential damages, even if notified of the possibility of such damages.

Appendix A – Industry Classification

1.1 Classification Structure

Industry Classification Benchmark (ICB) is a detailed and comprehensive structure for sector and industry analysis, facilitating the comparison of companies across four levels of classification and national boundaries. The classification system allocates companies to the Subsector whose definition closely describes the nature of its business as determined from the source of its revenue or the source of the majority of its revenue, as identified in the company's audited accounts and director's report.

1.1.2 Classification Guidelines

Allocation of Companies to Subsectors

A company will be allocated to that Subsector of the ICB whose definition most closely coincides with the source of its revenue or the source of the majority of its revenue.

Segmental reporting normally discloses revenue before tax, minority interests, extraordinary items and interest earned or incurred. Unless there is audited evidence that any of these items is specifically attributable to a class of business for which revenue is disclosed, it will be disregarded in assessing the sources of revenue. Where any part of the company's business is to earn interest or incur interest, or interest expenses are central to the business, then such interest shall be taken into account in determining the company's business.

A company which has businesses in two or more Subsectors is allocated to that Subsector which provides the largest part of revenue as indicated by the latest available report and accounts. A company engaged in three or more Subsectors, but within a specific industry, will normally be classified as General Mining, Diversified Industrials, Multi-utilities or Specialty Finance.

A company engaged in businesses in three or more Subsectors that are in two or more Industries, will normally be classified as a Diversified Industrials.

A company engaged in three or more classes of business within the Industrials Industry that differ substantially from each other, no one of which contributes 50% or more of revenue nor less than 10%, will normally be classified as Diversified Industrials. If there is a contribution of over 50% from any other one Industry group, the subsector of that Industry group with the highest revenue will be assigned to the company.

ICB will seek to maintain stability in the classification of companies by disregarding what they consider to be temporary fluctuations in the fortunes of individual businesses.

1.1.3 Industry Sectors

ICB will normally seek to avoid the maintenance of Sectors or Subsectors containing a single company.

1.1.4 Changes to the Industry Classification Benchmark

Changes to the structure of the ICB will be evolutionary. Any changes to the ICB structure (Subsectors, Sectors, SuperSectors, or Industries) shall take place with a minimum of six months' notice. These changes will be determined by ICB and will be based on long-term trends, rather than what they consider may be temporary fluctuations within individual industries.

1.2 Periodic Reviews

All classifications of the companies will be reviewed on an annual basis.

- + Coverage – All companies in the ICB global will be reviewed when an annual report of the company is published.
- + Cut-Off Date – Last trading day of January, April, July and October.
- + Review Procedures – The industrial classification of each company will be determined by analyzing the financial reports based on the rules under 1.1.3.
- + Announcement and Implementation – Periodic changes to the industry classification of a company will be announced on the first trading day in March, June, September and December and will be implemented on the third Friday of March, June, September and December and become effective on the next trading day after implementation.
- + In exceptional cases FTSE in consultation with the ICB Advisory Committee can classify companies on the basis of either the immediate end use of the product or the industrial process used.

1.3 Classification Changes

Where a significant change takes place in a company's structure as a result of a corporate event (such as a merger or demerger), its ICB classification may be reassessed on the basis of financial data formally published by the company. No changes in ICB classification will be made on the basis of non-public information, promises of action, assertions or aspiration of directors, unless these can be substantiated by audited or independently authenticated formal company statements as described in 1.1.1.

Any adjustment resulting from a change in a company's classification will be implemented at the same time as the corporate event is completed.

A company's classification may also be reviewed by ICB either at the discretion or at the request of the company or professional advisors acting on its behalf.

Any adjustment resulting from a change in a company's classification will be announced immediately and be implemented five trading days later and become effective on the next trading day after implementation.

Please note the above Industry Classification information has been re-printed directly from FTSE and ICB materials. For more information about the Industry Classification Benchmark (ICB), visit www.ftse.com/icb.
