## NASDAQ GLOBAL FUTURE MOBILITY™ INDEX

### NYGCAR™

#### INDEX DESCRIPTION

The Nasdaq Global Future Mobility Index is designed to track the performance of a selection of companies engaged in the following Nasdaq Sub-Themes: Autonomous Vehicles, Quantum Information & Optics, 3D Graphics, Electric Vehicles, Hybrid Vehicles, Electric Batteries and Lithium Batteries.

Nasdaq has created a theme and sub-theme classification process to review innovative technologies by analyzing millions of approved patents on a rolling one-year basis. The Index aims to select companies that may be innovative in their space based on their rolling one-year patent data.

#### SECURITY ELIGIBILITY CRITERIA

##### Security universe

A security must be included in the Nasdaq Global Disruptive Technology Benchmark™ Index (NYDTB™) as of the Index Reconstitution Effective Date. Please refer to NYDTB's methodology for further information on its constituent selection.

##### Eligible exchanges

A security must be listed on an exchange named in Appendix A.

##### Market capitalization eligibility

A security's float-adjusted company market capitalization must be at least \$500 million (USD).

##### Liquidity eligibility

A security must have a six-month average daily traded value of at least \$2 million (USD).

## **ESG eligibility**

A security's issuer must not be positively identified by Sustainalytics as exhibiting any of the following characteristics:

- Having an ESG Risk Score of 40 or higher.
- Non-compliance with the United Nations Global Compact (UNGC) principles and related international norms and standards, such as the Organization for Economic Cooperation and Development (OECD) Guidelines and United Nations (UN) Guiding Principles.
- Involvement of certain degrees in tobacco products, thermal coal, oil sands, controversial weapons, civilian firearms, small arms and military contracting, nuclear weapons, depleted uranium, adult entertainment or gambling, as described in Appendix B.

Wherein a security's data are unavailable for any field from Sustainalytics that is used to identify the aforementioned characteristics, the security is excluded from consideration for Index inclusion.

## **Other eligibility criteria**

If, at reconstitution, Nasdaq becomes aware that an issuer or security will soon undergo a fundamental change that makes it ineligible, Nasdaq will remove the security from consideration. This includes entering into a definitive merger or acquisition agreement or other pending arrangement that would make it ineligible for Index inclusion, or a filing of bankruptcy or similar protection from creditors.

## **INDEX CALENDAR**

### **Reconstitution schedule**

The Index is reconstituted semi-annually in January and July by applying the constituent selection process.

### **Reconstitution reference dates**

Unless otherwise specified, the Security Eligibility Criteria and Constituent Selection Process are applied using data as of the end of November and May, respectively.

### **Reconstitution announcement dates**

Index Reconstitutions generally are announced five (5) trading days prior to the Reconstitution Effective Date.

### **Reconstitution effective dates**

Index Reconstitutions become effective at market open on the trading day following the third Friday of January and July.

## Rebalance schedule

The Index is rebalanced semi-annually in conjunction with the Reconstitution. The Rebalance Effective and Announcement Dates are the same as those of the Reconstitution.

## Rebalance reference dates

The constituent weighting process is applied using data as of the end of December and June.

## Holiday schedule

The Index is calculated Monday through Friday and does not close for holidays, as it is a Global Index.

## Index calculation and dissemination schedule

The Index Value is calculated five (5) days a week, Monday through Friday, once per second from the start of the trading day in Tokyo (09:00:01 Japan Standard Time) until the close of the trading day in New York (17:16:00 Eastern Time).

# CONSTITUENT SELECTION

## Constituent selection process

Securities meeting all applicable Security Eligibility Criteria are considered for inclusion in the Index. Index constituents are selected according to the following steps.

### I. Assignment and Calculation of Nasdaq Scores

Eligible securities are matched with their issuers' Nasdaq Scores for each Nasdaq Sub-Theme represented in the Index (see Appendix C for a complete list of Nasdaq Themes and Sub-Themes). Companies receive scores for each theme in which they're involved, and no scores for themes in which they're uninvolved.

- Pure Score – The extent to which a company is involved in a particular theme relative to all other themes in which it is involved
- Contribution Score – The extent to which a company is involved in a particular theme relative to other companies involved in that theme

### II. Comparison Groups Ranking and Exclusion

Securities are partitioned into Comparison Groups, the cross-sections of market cap segment (large, mid and small) and Sub-Theme.

Any security is removed from consideration if its Pure Score and Contribution Score both fall below the 50<sup>th</sup> percentiles, respectively, of its Comparison Group's scores.

Any security that is not in the Index as of the Reconstitution Reference Date is removed from consideration if its Pure Score and Contribution Score both fall below the 65<sup>th</sup> percentiles, respectively, of its Comparison Group's scores.

An intensity score is calculated for each security. Intensity score is defined as the number of Sub-Themes in which the issuing company qualifies.

### **III. Foreign Ownership Exclusion**

Any security is removed from consideration if it has a foreign ownership limit of less than 20%.

### **IV. Pooling and Selection**

The securities still considered for Index inclusion are partitioned into two security pools—Primary Subsector securities and Wildcard securities—that are used to determine the Index constituents. The Index contains up to 100 securities; the Index size is dependent on the size of two security pools. Index Securities are selected according to the following steps:

#### **Primary Subsector and Wildcard security designation**

- All securities belonging to Primary ICB Subsectors, named in Appendix D, are identified as Primary Subsector securities. All other securities are identified as Wildcard securities. ICB is a product of FTSE International Limited that is used under license.

#### **Primary Subsector security pool designation**

- If fewer than 100 Primary Subsector securities exist, all are designated to the Primary Subsector security pool. Otherwise, Primary Subsector securities are ordered by Intensity Score (highest to lowest), average Contribution Score percentile (highest to lowest) and six-month average daily traded value (highest to lowest). Securities within the 100 first-ordered are designated to the Primary Subsector security pool.

#### **Wildcard security selection**

- A Wildcard security is removed from consideration if it has an Intensity Score equal to or less than the minimum Intensity Score among securities in the Primary Subsector security pool.
- Wildcard securities are ordered by Intensity Score (highest to lowest), average Contribution Score percentile (highest to lowest) and six-month average daily traded value (highest to lowest). A Wildcard security is selected for Index inclusion if it is ordered within the first five percent (rounded down to the nearest integer) of the number of securities in the Primary Subsector security pool; e.g., if the Primary Subsector security pool consists of 99 securities, the four first-ordered Wildcard securities are selected for Index inclusion.

#### **Primary Subsector security selection**

- Up to 100 Primary Subsector securities are selected based on the order determined above such that the Index does not exceed 100 total Index Securities; e.g., if the Primary Subsector security pool consists of 99 securities and four Wildcard securities are selected, the 96 first-ordered Primary Subsector securities are selected.

## CONSTITUENT WEIGHTING

### Constituent weighting scheme

The Index is a modified float-adjusted company market capitalization-weighted index.

### Constituent weighting process

Index Securities' initial weights are determined by dividing each Index Security's float-adjusted company market capitalization by the aggregate float-adjusted company market capitalization of all Index Securities. Initial weights are then adjusted to meet the following constraint:

- No Index Security weight may exceed 4.5%.

For additional information about index weighting, see **Nasdaq Index Weight Calculations**.

## INDEX MAINTENANCE

### Deletion policy

If, at any time, Nasdaq determines that an Index Security has or will become ineligible for continued inclusion in the Index due to bankruptcy, delisting, or a definitive agreement that would likely result in the security no longer being Index eligible, the security is removed from the Index as soon as practicable and is not replaced. Ordinarily, a security will be removed from the Index at its Last Sale Price. If, however, at the time of its removal the Index Security is halted from trading on its primary listing market and an official closing price cannot readily be determined, the Index Security may, in Nasdaq's discretion, be removed at a zero price. The zero price will be applied to the Index Security after the close of the market but prior to the time the official closing value of the Index is disseminated, which is ordinarily 17:16:00 ET.

### Corporate actions

In the periods between scheduled index reconstitution and rebalancing events, individual Index securities may be the subject to a variety of corporate actions and events that require maintenance and adjustments to the Index. Specific treatment of each type of corporate action or event is described in **Nasdaq Corporate Actions and Events Manual – Equities**, which is incorporated herein by reference.

In certain cases, corporate actions and events are handled according to the weighting scheme or other index construction techniques employed. Wherever alternate methods are described, the Index will follow the "Non-Market Cap Corporate Action Method."

### Index share adjustments

Index Share changes are not made outside of the selection/weighting process; however, changes arising from stock dividends and stock splits are made to the Index on the evening prior to the effective date of

such corporate actions. In the case of certain spin-offs or rights issuances, the price of the Index Security is adjusted.
