

Nasdaq US Health Care Innovators IndexSM Methodology

Index Description

The Nasdaq US Health Care Innovators IndexSM is designed to provide exposure to non-mega cap US Health Care companies within the Nasdaq US Benchmark Index that are non-earners.

Index Calculation

The Nasdaq US Health Care Innovators Index is a modified market capitalization weighted index. The value of the Index equals the aggregate value of the Index share weights, also known as the Index Shares, of each of the Index Securities multiplied by each such security's Last Sale Price¹, and divided by the divisor of the Index. The divisor serves the purpose of scaling such aggregate value to a lower order of magnitude which is more desirable for reporting purposes. The Index began on May 23, 2016 at a base value of 1000.

The formula for index value is as follows:

Aggregate Adjusted Market Value/Divisor

The formula for the divisor is as follows:

(Market Value after Adjustments/Market Value before Adjustments) X Divisor before Adjustments

Three versions of the Index are calculated:

- The price return index (Nasdaq: NQHCIN) is ordinarily calculated without regard to cash dividends on Index Securities.
- The total return index (Nasdaq: NQHCINT) reinvests cash dividends on the ex-date.
- The net total return index (Nasdaq: NQHCINN) reinvests cash dividends on the ex-date based on an Index security's country of incorporation withholding rate.

Both Indexes reflect extraordinary cash distributions.

The Indexes are calculated during the trading day and are disseminated once per second from 09:30:01 to 17:16:00 ET. The closing value of the Index may change up until 17:15:00 ET due to corrections to the Last Sale Price of the Index Securities.

¹ For purposes of this document, Last Sale Price refers to the following:

For a security listed on Nasdaq, it is the last sale price on NASDAQ, which normally would be the Nasdaq Official Closing Price (NOCP) when Nasdaq is closed. For any NYSE-listed or NYSE Amex-listed security, it is the last regular way trade reported on such security's primary U.S. listing market. If a security does not trade on its primary listing market on a given day, the most recent last sale price from the primary listing market (adjusted for corporate actions, if any) is used.

Eligibility

Index eligibility is limited to specific security types only. The security types eligible for the Index include common stocks.

Eligibility Criteria

To be eligible for inclusion in the index, a security must meet the following criteria:

- be a component of the Nasdaq US Benchmark Index (NQUSB);
- be classified as Health Care according to the Industry Classification Benchmark (ICB);
- one security per issuer is permitted²;
- not be in the top 150 securities of the Nasdaq US Benchmark Index by market cap;
- have a 3-month average daily dollar trading volume (ADDTV) in the top 70% of the Nasdaq US Benchmark Index if not in the index in the prior period, or
 - have a 3-month average daily dollar trading volume (ADDTV) in the top 80% of the Nasdaq US Benchmark Index if in the index in the prior period;
- considered to be non-earners by means of having negative earnings over the prior 4, prior 8 or future 4 quarters at least half of the time;
- may not have entered into a definitive agreement or other arrangement which would likely result in the security no longer being Index eligible;
- may not be issued by an issuer currently in bankruptcy proceedings; and
- additional proprietary eligibility are applied.

Index Evaluation

The Index is evaluated semi-annually in April and October. The above Eligibility Criteria are applied using market data through the end of March and September, respectively. Securities meeting the criteria are included in the Index. Security additions and deletions are made effective after the close of trading on the last trading days in April and October.

Additionally, if at any time during the year other than the Evaluation, an Index Security no longer meets the Eligibility Criteria, or is otherwise determined to have become ineligible for inclusion in the Index, the security is removed from the Index and is not replaced. Ordinarily, a security will be removed from the Index at its Last Sale Price. If, however, at the time of its removal the Index Security is halted from trading on its primary listing market and an official closing price cannot readily be determined, the Index Security may, in Nasdaq's discretion, be removed at a zero price. The zero price will be applied to the Index Security after the close of the market but prior to the time the official closing value of the Index is disseminated, which is ordinarily 17:16:00 ET.

Index Maintenance

Index Share changes are not made during the quarter however changes arising from stock dividends and stock splits are made to the Index on the evening prior to the effective date of such corporate action. In the case of certain spin-offs or rights issuances, the price of the Index Security is adjusted.

² If an issuer has multiple securities, the security with the highest dollar trading volume will be selected for possible inclusion into the Index.

A special cash dividend announced by the listing exchange, will result in an adjustment to the Last Sale Price of an Index Security prior to market open on the ex-date for the special amount distributed. A special dividend may also be referred to as extra, extraordinary, non-recurring, one-time, unusual, etc.

Ordinarily, whenever there is a change in an Index Security or a change to the price of an Index Security due to spin-offs, rights issuances or special cash dividends as mentioned above, the divisor is adjusted to ensure that there is no discontinuity in the value of the Index which might otherwise be caused by any such change. All changes are announced in advance and are reflected in the Index prior to market open on the Index effective date.

Index Weighting

The Index employs a modified market capitalization weighting methodology. At the rebalancing, the Index is rebalanced such that the maximum weight of any Index security does not exceed 3%. The excess weight of any capped security is distributed proportionally across the remaining Index securities.

The weighting methodology is applied to the capitalization of each Index Security, using the Last Sale Price of the security at the close of trading on the last trading days in March and September. Index Shares are then calculated multiplying the weight of the security derived above by the new market value of the Index and dividing the modified market capitalization for each Index Security by its corresponding Last Sale Price. The changes are effective after the close of trading on the last trading days in April and October.

Nasdaq may, from time to time, exercise reasonable discretion as it deems appropriate in order to ensure Index integrity.
