

NASDAQ OMX Global Auto IndexSM Methodology

Index Description

The NASDAQ OMX Global Auto Index is designed to track the performance of the largest and most liquid companies engaged in the manufacturing of automobiles.

Index Calculation

The NASDAQ OMX Global Auto Index is a float adjusted modified market capitalization weighted index. The value of the Index equals the aggregate value of the Index share weights, also known as the Index Shares¹, of each of the Index Securities multiplied by each such security's Last Sale Price² and spot rate, and divided by the divisor of the Index. The divisor serves the purpose of scaling such aggregate value to a lower order of magnitude which is more desirable for reporting purposes. The Index began on February 22, 2011 at a base value of 250.00.

The formula for index value is as follows:

Aggregate Adjusted Market Value/Divisor

The formula for the divisor is as follows:

(Market Value after Adjustments/Market Value before Adjustments) X Divisor before Adjustments

Two versions of the Index are calculated – a price return index and a total return index.

- The price return index (Nasdaq: QAUTO) is ordinarily calculated without regard to cash dividends on Index Securities.
- The total return index (Nasdaq: QAUTOX) reinvests cash dividends on the ex-date.

All Indexes reflect extraordinary cash distributions.

The Indexes are calculated during the trading day and are disseminated once per second, five (5) days a week, Monday through Friday, starting by the earliest time zone Asia/Tokyo and close by the latest time zone America/New York in USD.

¹ Index Shares are the free float shares outstanding determined by multiplying the total shares outstanding by the free float factor provided by Thomson Reuters.

² For purposes of this document, Last Sale Price refers to the last regular way trade reported on such security's Index Market. The Index Market is the listing market for which prices are received and used by Nasdaq in the Index calculation and generally will represent the most liquid trading market of the Index Security. If a security does not trade on its Index Market on a given day or the Index Market has not opened for trading, the most recent last sale price from the Index Market (adjusted for corporate actions, if any) is used. For securities where Nasdaq is Index Market, the Last Sale Price may be the Nasdaq Official Closing Price (NOCP) when Nasdaq is closed.

Eligibility

Index eligibility is limited to specific security types only. The security types eligible for the Index include common stocks, ordinary shares, depositary receipts (both American and Global), depositary shares, Dutch certificates and preference shares.

Eligibility Criteria

To be included in the Index, a security must meet the following criteria:

- be a member of the NASDAQ Global Index (NQGI);
- be classified as an Automobile Manufacturer under ICB code 3353;
- one security per issuer is permitted. If an issuer has multiple securities, the security with the highest average dollar trading volume will be selected for possible inclusion into the Index;
- have a minimum worldwide market capitalization of USD 500 million;
- have a minimum three-month average daily dollar trading volume of USD 1 million;
- have a minimum free float of 20%, as provided by FTSE.
- may not have entered into a definitive agreement or other arrangement which would likely result in the security no longer being Index eligible; and
- may not be issued by an issuer currently in bankruptcy proceedings.

Index Evaluation

The Index Securities are evaluated annually in June. The above Eligibility Criteria are applied using market data through the end of May. Securities meeting the criteria are included in the Index. Security additions and deletions are made effective after the close of trading on the third Friday in June.

Additionally, if at any time during the year other than the Evaluation, an Index Security no longer meets the Eligibility Criteria, or is otherwise determined to have become ineligible for inclusion in the Index, the security is removed from the Index and is not replaced. Furthermore, any Index Security that reaches its foreign investment limit between quarterly rebalances is removed from the Index. Ordinarily, a security will be removed from the Index at its Last Sale Price. If, however, at the time of its removal the Index Security is halted from trading on its Index Market and an official closing price cannot readily be determined, the Index Security may, in Nasdaq's discretion, be removed at a zero price. The zero price will be applied to the Index Security after the close of the last trading Index Market but prior to the time the official closing value of the Index is disseminated, which is ordinarily 17:16:00 ET.

Index Maintenance

Changes in the price and/or Index Shares driven by corporate events such as stock dividends, stock splits and certain spin-offs and rights issuances are adjusted on the ex-date. If the change in total shares outstanding³ arising from other corporate actions is greater than or equal to 10.0%, the change is made as soon as practicable. Otherwise, if the change in total shares outstanding is less than 10.0%, then all such changes are accumulated through the end of February, May, August and November and made effective

³ If a security is a depositary receipt listed in the US, the total shares outstanding is the actual depositary shares outstanding as reported by the depositary banks.

at one time on a quarterly basis after the close of trading on the third Friday in March, June, September and December, respectively. Intraquarter, the Index Shares are adjusted by the same percentage amount by which the total shares outstanding have changed.

Changes to the free float factor will be made as soon as practical if the change is greater than 10%, otherwise free float factor changes as of the end of February, May, August and November will be updated and made effective after the close of trading on the third Friday in March, June, September and December, respectively in conjunction with the quarterly share changes noted above.

A special cash dividend announced by the listing exchange, will result in an adjustment to the Last Sale Price of an Index Security prior to market open on the ex-date for the special amount distributed. A special dividend may also be referred to as extra, extraordinary, non-recurring, one-time, unusual, etc.

Ordinarily, whenever there is a change in Index Shares, a change in an Index Security or a change to the price of an Index Security due to spin-off, rights issuances or special cash dividends as mentioned above, the divisor is adjusted to ensure that there is no discontinuity in the value of the Index which might otherwise be caused by any such change. All changes are announced in advance and are reflected in the Index prior to market open on the Index effective date.

Index Rebalancing

The Index employs a float adjusted modified market capitalization weighted methodology. At each quarter, the Index is rebalanced such that the maximum weight of any Index Security does not exceed 8% and no more than 5 securities are at that cap. The excess weight of any capped security is distributed proportionally across the remaining Index Securities. If after redistribution, any of the 5 highest ranked Index Securities are weighted below 8%, these securities are not capped. Next, any remaining Index Securities in excess of 4% are capped at 4% and the excess weight will be redistributed proportionally across the remaining Index Securities. The process is repeated, if necessary, to derive the final weights.

The modified market capitalization weighting is applied to the float capitalization⁴ of each Index Security, using the Last Sale Price and spot rate of the security at the close of trading on the last trading day in February, May, August and November and after applying quarterly changes and free float factors to the total shares outstanding. Index Shares are then calculated multiplying the weight of the security derived above by the new market value of the Index and dividing the float adjusted modified market capitalization for each Index Security by its corresponding Last Sale Price and spot rate. The changes are effective after trading on the third Friday in March, June, September and December.

Nasdaq may, from time to time, exercise reasonable discretion as it deems appropriate in order to ensure Index integrity.

June 2016

⁴ Nasdaq started to float adjust the Index on June 20, 2011, previous to this date the Index was not float adjusted.
